

Item	N/A	Done	Instruction (1)	*Ref	
1.			Openings over 24 feet wide require expansion mullions every 12 to 15 feet.	pg.3	
2.			Openings over 24 feet wide require $3/8$ " flashing splice joints every $12-15$ feet. $\frac{1}{4}$ " weep holes are required at quarter points of daylight openings. See Detail 3 .	pg.4	
3.			Horizontal glass stops should be cut to a length of daylight opening $-1/32$ ".	pg.8	
4.			Mullion end caps must be attached and sealed to the tops of all vertical mullions and jamb mullions. See Detail 15 .	pg.10	
5.			Profiles of horizontal, head, and sill mullions must be sealed prior to attachment to vertical mullions and jambs. See Detail 17 .	pg.11	
6.			Flashing splices should have 3/8" space between ends. Splice sleeve should be applied with sealant and bond breaker tape. End dams should be applied and sealed. All anchors that penetrate sill flashing should be sealed. See Detail 19 .	pg.13	99
7.		<u> </u>	Just prior to setting the frame in the flashing, a continuous bead of sealant should be applied to the top of the upturned leg on the sill flashing. All frames should be installed level, square, and true. Perimeter caulk joint width should be a minimum of $\frac{1}{4}$ " under the sill flashing and a minimum of $\frac{3}{8}$ " at the head and jambs. The fastener that attaches the sill to the flashing should not penetrate the sill flashing. All perimeter anchor heads should be sealed over.	pg.14	99
8.			Water deflectors are required at the ends of all intermediate horizontals. Attach water deflectors with preapplied tape and seal perimeter of water deflector. Seal the ramp of the water deflector to the glazing reglet walls. See Detail 28 and Detail 29 .	pg.19	<u>~</u>
9.			Apply perimeter sealant at the interior and exterior of the system. Do not seal between the sill and the flashing at the exterior. Perimeter caulk bead should be under the sill flashing. See Detail 31 .	pg.20	
10.			Apply sealant to all vertical/horizontal seams within the glass pockets. See Detail 32 .	pg.20	
11.			Exterior glazing gaskets should be installed first. Vertical gaskets should be cut to a length of daylight opening plus ¼" per foot of daylight opening. Horizontal gaskets should be cut to a length of daylight opening plus ¼" per foot of daylight opening. Horizontal/vertical gasket corners should be sealed. See Detail 33 .	pg.21	99
12.		<u> </u>	Apply sealant to the profile of the glass stops prior to installation. Detail 38. Interior vertical gaskets should be cut to a length of daylight opening plus ¼" per foot of daylight opening. Interior horizontal gaskets should be cut to a length of daylight opening plus ¼" per foot of daylight opening. Horizontal/vertical gasket corners should be sealed.	pg.24
