**YKK
ap**®

We've upgraded our integrated software to move your business forward.

Ycalc X5's five key features are designed for how you do business today.

Ycalc X5 contains YKK AP's most popular products, including those from the enerGfacade® energy saving family and ProTek® hurricane and blast mitigation family. Plus, it's been designed to address the most important areas of your business.

Project Estimation

Create estimates, maximize your profits, and win more jobs using our easy estimating tools.

Preliminary Structural Design

Analyze the system's ability to withstand specific design pressures and identify members requiring any extra reinforcement.

Shop Drawings

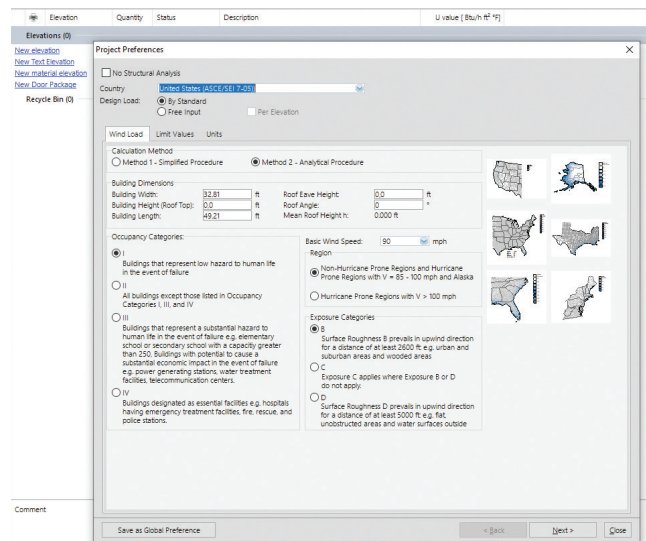

Saves time by automating the creation of shop drawings, including dimensioned elevations and sections.

Material Optimization / Take-off

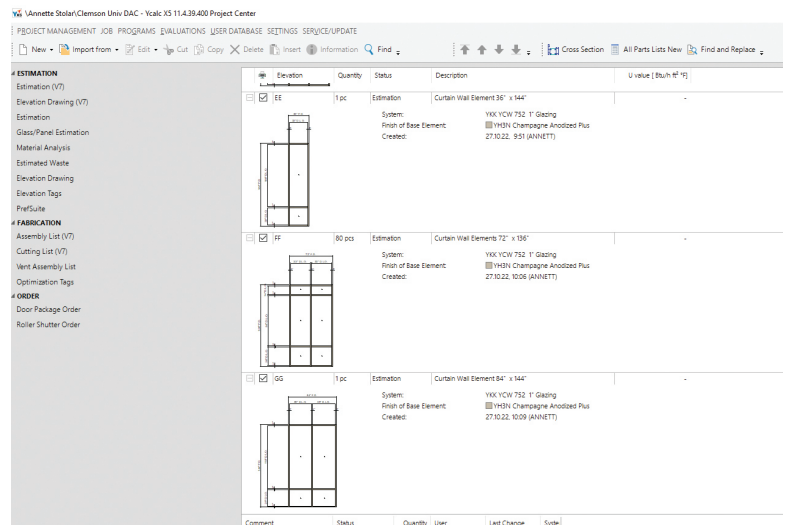

Quickly prepare material orders and cut lists to make sure you're getting the most out of your resources and budget for every project.

Fabrication Utilities

Streamline material flow within the shop and keep material organized with accurate production information.

An easy-to-use interface helps determine the structural analysis of a system.

Elevations and sections can be included in the shop drawings all in one location.
